New Hot Topic: Renal Amyloidosis by Dr. Ana Carina Ferreira and Dr. Luisa Lobato in the Young Nephrologists' Platform (YNP) blog on NDT-Educational

Amyloidosis is a group of rare diseases, where a specific protein suffers a pathogenic misfolding in its conformation, with subsequent aggregation, and insoluble fibril formation, acquiring a beta-sheet conformation, that has specific properties. This amyloidogenic protein may accumulate in various organs, including the kidneys, and eventually leads to organ failure. More than 25 different proteins are known to cause systemic or localized amyloidosis in humans.

EUDIAL Working Group Survey

EUDIAL would like to know your views about how you manage fluid status in HD patients and gather some details about current practice on your dialysis units. This survey follows an initial pilot in UK dialysis units and aims to assess global practice patterns in fluid management in haemodialysis.

To answer the survey please click [here](#).

Follow NDT and CKJ on Twitter!

The journals of the ERA-EDTA, NDT (Nephrology, Dialysis, Transplantation) and CKJ (Clinical Kidney Journal), are currently the leading nephrology journals in Europe. So why not follow them on Twitter? Via this social medium, you will be among the first ones who get information about the articles of the next issues, breaking news, and learn about special debates. Connect with other NDT or CKJ readers to discuss the latest findings and study results in the field of nephrology! Check out the latest tweets from **NDT** ([MailScanner has detected a possible fraud attempt from "newslettereraedta.era-edta.org" twitter.com/NDTsocial](#)) and **CKJ** ([MailScanner has detected a possible fraud attempt from "newslettereraedta.era-edta.org" twitter.com/CKJsocial](#)) and retweet!
