ISE Quarterly Newsletter

The latest news in the world of
Endocrinology

Message from ISE Chairperson Prof. Margaret Wierman

Dear Colleagues and Friends,

I would like to wish to all of you around the world a happy and healthy new year.

2020 has been a very special year full of challenges for us all, but ISE remains more than ever committed to continue to federate the endocrine community...

Going Virtual with our Partners

As every year, in 2020 we endorsed a series of meetings organised by our partners, some of which had to be held 100% online due to the current global situation.

Through these endorsements, ISE supports the development of local and regional meetings in underserved parts of the world and stimulates the interest of the local and regional endocrine communities in expanding their programs and developing relationships with international experts.

ENDOCRINE WEEK 2020

In November 2020, the Endocrine Society of India in association with the International Society of Endocrinology organised a 6-day virtual event featuring free papers, innovations in endocrinology, research from academic institutions across the country and state-of-the-art lectures by leading global experts.

DECON 2020

In October 2020, the International Society of Endocrinology endorsed the 6th International Diabetes & Endocrine Conference (DECON), which was held as a virtual event. The challenging aspects of diabetes, maternal medicine, thyroid, and other endocrine disorders are discussed on an annual basis in this conference.

To access the recordings of the lectures given in these meetings, access our Endorsed Meetings section on our ISE Global Education Hub.

CME/CPD Accredited Metabesity Program

The term Metabesity expresses the links among diverse major diseases and conditions to shared metabolic roots. Diabetes, obesity, and cardiovascular diseases,

joined by neurodegenerative disorders, cancer, and even the aging process itself, share metabolic and inflammatory provenances.

If you haven't accessed the Metabesity Online program yet, we invite you to start with the first of the 3 available courses: [Definition and Diagnosis – Developed in collaboration with Dr. Hasan Aydın \(Turkey\)](#)

This course explores the definitions of "metabolic syndrome" and "obesity" and will give you the tools to contrast the definition of "obesity" in childhood and adolescence, and recognize the rationale for ethno-specific cutoffs.
